Technical Information

Chrysler 9.25" Rear "ZF Axle" 2010 Up

The following vehicles have moved to a ZF 9.25" rear axle:

Durango	2010-12
Grand Cherokee	2010-12
Ram1500 ½ ton	2011-12

The ZF axles use NSK bearings which are available at the dealer only. We cannot mix the NSK cone & cups with our Timken bearings that are in our QG kits. Even thou they are dimensionally the same.

The ring gear bolts and pinion nut are metric instead of standard on the ZF axle.

We currently do not have any of the metric style ZF gear sets available in QG.

In order to do a rebuild you must sell a late style bearing kit R925R-LATE and a standard rear gear set like a C9.25-391. This will convert the components from metric to standard.

The following page shows the outer appearance between a standard 9.25" and a ZF 9.25". The ZF cover is different than the standard cover.
